EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with E. Rico Hernandez on 26 March 2006.

The application has been amended as follows:

a.) In claim 15, line 10, replace the phrase "the potentially distorted data signal" with "the data signal"; in line 14, replace the phrase " for the effects" with "for effects"; in line 17, replace the phrase "the received distorted data signal" with "the data signal"; in line 19-20, replace the phrase " the received distorted data signal" with "the data signal".

REASON FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: The instant application discloses a communications system including transmitter device, receiver system and a communications link. An exhaustive search of prior art records failed to disclose a system comprising "a device driver adapted to transmit a data signal, the data signal having transmission rates at least as high as 44.736 Mbps; and a communications link coupled to the device driver.... the communications link is at least 18,000 feet long; a processor electrically coupled to the receiver device and adapted to receive the distorted data signal from the receiver device, regenerate the data to compensate for effects of the communication link on the data signal, and output the regenerated data signal, wherein the processor includes: (a) a decoding mechanism configured to: (i) produce a corrected data signal from the received data signal, (ii) split the corrected data signal into component data signals, (iii) generate a data clock reference signal based on the received distorted data signal and a clock reference signal substantially matching a transmission rate of the received distorted data signal, and (iv) convert said component data signal into digital component data signals synchronized to said data clock reference signal, (b) an encoding mechanism configured to: (i) receive said digital component data signals synchronized to said data clock reference signal; (ii) convert said synchronized digital component data signals as output signals; and (iii) transmit at least one of the output signals as the regenerated data signal: as disclosed in claim 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
